

The Intesis portfolio includes a wide variety of AC interfaces for the integration of Mitsubishi Electric Air Conditioners into the most popular home and building automation standard protocols.

In 2006, Intesis launched the first product able to integrate Mitsubishi Electric AC Systems into KNX that, shortly afterwards, was certified by the KNX organization. Now, after years of experience, the products from Intesis make it easy to connect Mitsubishi Electric connect units with all the most extensively used standard protocols on the market.
